Forward Voltage Bins

Table1:

Bin Code	Minimum Forward Voltage @If=1000mA (V)	Maximum Forward Voltage @If=1000mA (V)
E	3.4	3.5
F	3.5	3.6
G	3.6	3.7

Notes For Table1:

- 1.LED Ritter maintains a tolerance of $\pm 0.05V$ on forward voltage measurements.
- 2.For binning purposes, Forward Voltage for Dental Blue is binned with all three LED dies connected in series.

Radiant Flux Bins

Table2:

Bin Code	Minimum Radiant Flux @If=1000mA (mW)	Maximum Radiant Flux @If=1000mA (mW)
13	1200	1300
14	1300	1400
15	1400	1500
16	1500	1600

Notes For Table1:

- 1.Radiant flux performance guaranteed within published operating conditions. LED Ritter maintains a tolerances of $\pm 10\%$ on flux measurements.
- 2.Future products will have even higher levels of radiant flux performance. Contact LED Ritter Sales for updated information.

Peak Wavelength Bins

Table3:

Bin Code	Minimum Peak Wavelength @If=1000mA (Nm)	Maximum Peak Wavelength @If=1000mA (Nm)
U18	360	365
U17	365	370

Notes For Table3:

1. LED Ritter maintains a tolerance of $\pm 2.5nm$ on peak wavelength measurements.

Average Rdiant Flux Maintenance Projections

Base on long-term WHTOL testing, LED Ritter projects that the Series will deliver, on average, 70% Radiant Flux Maintencceat 1000 hours of operation at a forward current of 1000 mA per die. This projection is based on constant current operation with junction temperature maintained at or below 125°C.
